

PRODUCT DESCRIPTION

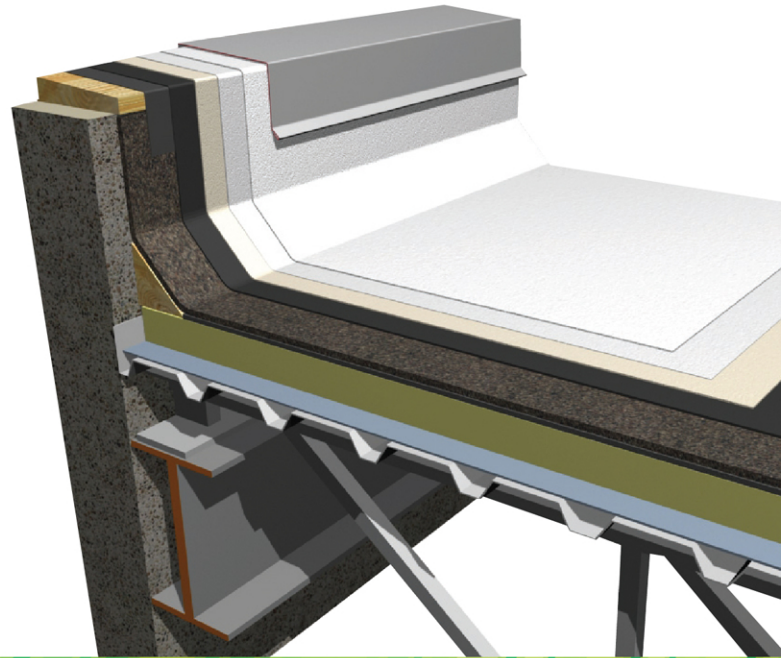

TIOCOAT is a bright white, polyurethane modified acrylic elastomeric coating. It is developed for use over existing roofing systems such as modified bitumen, built-up (BUR) and concrete for commercial and industrial applications. TIOCOAT forms a protective barrier that expands and contracts with varying temperatures. TIOCOAT forms a weather resistant membrane that reflects the sun's heat which reduces the interior temperature of buildings. The dirt pick-up resistance technology of the acrylic polymer enhances the reflective properties of the membrane. TIOCOAT is an easy to apply roof coating that offers years of durable protection.

BENEFITS OF ELASTOMERIC ROOF COATINGS

There are many benefits to using TIOCOAT Elastomeric Roof Coating. The product applies to a smooth, clean and uniform appearance. It protects the roofing from UV degradation but most importantly it has high reflectivity for energy savings. TIOCOAT also has high adhesion to existing asphaltic roof coatings.

ADVANTAGES

- Can be applied to many suitable existing roof substrates including: BUR, Mod-bit, concrete and asphalt.
- Reflects 89% of the sun's UV rays.
- Made to withstand extreme climate changes.
- Significantly extends the life of the roof.
- Reduces "Heat Island Effect".
- Keeps homes/buildings cooler in hot summer months.
- Cuts air conditioning costs by 20-30%.
- Water based product. No harmful chemicals (GREEN).
- Manufactured by a reputable Canadian family business.
- Increases efficiency of solar panels by reflecting UV rays.
- LEED credit 7.2 (reduction of the Heat Island Effect).
- Energy Star certified product.
